

To reduce the level of pollutants entering the stormwater system here's what you can do...

- Don't dump engine oil down drains or gullies. Recycle it at 126 Ledge Road Facility (residential only)
- Wash your car on the lawn or at an approved car wash facility.

- Keep detergents out of the gutter.
- Don't put garden refuse or grass clippings down stormwater drains or into local waterways or bush land - make compost
- Use fertilizer and garden chemicals sparingly and avoid overwatering
- Sweep instead of hosing your driveway
- Bag and dispose of animal waste
- Try to surround hard surfaces with vegetation - increasing paved areas will increase stormwater run-off
- Don't make illegal connections to stormwater drains
- Bin your rubbish securely so it can not blow about
- Clean brushes over soil. Don't allow paint, solvents and cleaners into the drain
- Put litter and cigarettes in the bin. Don't drop them in the street.
